FEEDING DIRECTIONS

Hi-Pro High Protein Dog Food may be served moist or dry. Either way, it will provide your dog with complete, balanced nutrition. To

serve moist, simply add one part warm water to four parts Hi-Pro High Protein Dog Food. Stir until pieces become moistened. Feed while warm. A dog should be maintained in good body condition and not allowed to become overweight. The food intake required to maintain good body condition will vary depending on age, activity level, environment and other stress factors. Consequently, the food requirement for each dog will vary, and should be adjusted accordingly.

Puppies: Puppies begin to eat solid food at 3-4 weeks of age. Add warm water to soften the food and after 8 weeks, mix with water or feed dry. Feed puppies all the moistened Hi-Pro High Protein Dog Food they will consume at intervals throughout the day. If fed moistened, do not serve more than what the puppies will consume in a thirty-minute period to ensure product freshness. If fed dry, food may be kept before the puppies at all times. After one year of age, follow adult feeding directions.

Pregnant and nursing: Hi-Pro High Protein Dog Food provides the extra nutrition needed by reproducing females in stages of gestation and lactation. Food consumption may vary during gestation, so feed the amount needed to maintain the pregnant female's good body condition. Food intake may double or even quadruple during lactation.

Feeding Tip: Changes in your pet's feeding habits should be made gradually. When changing over to Hi-Pro High Protein Dog Food, first substitute small amounts of Hi-Protein Dog Food in place of your pet's current food. Then over the next week to 10 days, increase the amounts of Hi-Pro High Protein Dog Food while decreasing amounts of his other food, until your pet has a 100% Hi-Pro High Protein Dog Food.

Regular veterinarian visits are recommended to ensure your dog's good health.
